Yogesh Singh Bhadoriya

FULL STACK DEVELOPER

Java · Spring Boot · Node.js · REST APIs

About Me

Full-stack developer skilled in Java, Spring Boot, React, and Node.js. Experienced in designing optimized MySQL schemas and building reliable REST APIs, with a habit of debugging issues end to end. Ready to contribute to backend and full-stack development from day one.

Professional Training

Java Full Stack Development

Cybrom Technologies, Bhopal — Jan 2026 – Sep 2026

Practical, hands-on training in full-stack Java development.

- **Frontend:** HTML, CSS, JavaScript, React, Bootstrap, Tailwind CSS
- **Database:** SQL, schema design, DBMS concepts, normalization, query writing
- **Backend:** Core Java, Spring, Spring Boot, Spring MVC, Hibernate, JPA, REST APIs
- **Foundations:** DSA, Git, SDLC, professional development classes

Experience

Java Full Stack Development Intern

Cybrom Technology Pvt. Ltd. · On-Site, India — Oct 2026 – Ongoing

- Worked across the software development lifecycle, from requirement analysis and technical documentation to backend implementation and testing.
- Prepared **BRD, FRD, DFDs, database designs, and API specifications** to translate business requirements into technical solutions.
- Developed and tested backend modules using **Spring Boot, Spring MVC, JPA/Hibernate, and MySQL**, following a layered architecture.
- Used **Git, GitHub, Postman, and Figma** for version control, API testing, collaboration, and interface planning.

Software Development Intern

FlutterFlirt · Remote, India — May 2026 – Jun 2026

- Built backend modules in Node.js, structuring routes and controllers to keep business logic decoupled from request handling.
- Redesigned SQL schemas by normalizing repeated fields and adding indexes on frequently-queried columns, cutting slow query patterns.
- Built and integrated REST APIs consumed by the frontend team, defining consistent request/response contracts and error handling.
- Traced and fixed backend bugs via server logs and step-through debugging, resolving data-join and null-handling issues before release.

Projects

Milan – Trust-First Matrimonial Web Application

React, Spring Boot, MySQL — Oct 2026 – Ongoing

- **Problem:** Matrimonial sites struggle with fake, inactive and scammer profiles. Building a multi-tenant platform for marriage bureaus with 3-level trust verification (OTP, selfie, government ID) and automatic hiding of inactive profiles.
- Designed the system end to end: BRD, FRD, DFDs and 27 Figma screens for 3 roles (End User, Host, Super Admin).
- Implementing JWT-secured REST APIs with role-based access and subscription plans using Spring Boot and MySQL.

ChainFlow – Supply Chain & Warehouse Management System

React, Spring Boot, MySQL Jul 2026 – Sep 2026

- **Problem:** Spreadsheet stock tracking causes count mismatches and late reorders, with no single view of suppliers and orders. Built one system for inventory, suppliers, and orders.
- Modeled products, suppliers, warehouses, stock, and orders in a relational MySQL schema, with transactional stock updates so counts stay consistent as orders are placed and received.
- Built REST APIs for stock in/out, purchase orders, and low-stock reporting, consumed by a React dashboard.

D2Car Web Application

React, Spring Boot, MySQL May 2026 – Aug 2026

- **Problem:** Buyers compare cars on many criteria, and fixed search needs an endpoint per filter combination. Built a listings platform (50+ cars) with search, filtering, and detail pages.
- Wrote one dynamic query that combines any set of optional filters, replacing a separate endpoint per combination.
- Built 4+ REST APIs on an MVC structure (controller, service, repository) for cleaner testing and easier scaling.

Education

Bachelor of Technology in Computer Science

SAGE University, Bhopal 2027

CGPA: 8.4/10 · Coursework: DSA, DBMS, Operating Systems, OOP
